

"Let's start at the ver-y be-gin-ning."

Find-ing Read-ing, Writ-ing and Spell-ing
Diff-i-cult
Why?

Some people have a brain processing difference. It can affect receiving, processing and expressing words when you talk, read, spell and write. It can even impact on some areas of math.

Having a brain that thinks differently is not related to how smart you are. You are most likely **Super Smart**, **Super Creative** and a **Super Thinker**, but don't feel like it because school is based mainly on using words, reading, spelling and writing.

There are 6 areas to understand

1. Seeing
2. Hearing
3. Hearing and saying the sounds of letters and words
4. Being organised
5. Remembering things
6. How fast you can do things
